

Verano® MAKE THIS YOUR MOMENT

COLLECTIE PLISSÉS

LICHTREGULERING EN PRIVACY

Raamdecoratie wordt niet alleen decoratief, maar ook functioneel toegepast. Een van de belangrijkste eigenschappen van raamdecoratie is het weren van invallend zonlicht. Invallend zonlicht zorgt voor oververhitting en heeft een negatief effect op het zichtcomfort. De mate van licht- en warmtewering is afhankelijk van de kleur en het materiaal van de raamdecoratie.

Wist je dat raamdecoratie tevens een relatief onbekend wapen is om energie te besparen? De isolatiewaarde van ramen, dus hoe goed (of slecht) de ramen warmte in huis houden, wordt sterk verbeterd door de toevoeging van raamdecoratie doordat er met raamdecoratie een extra luchtspouw wordt gecreëerd. Raamdecoratie kan de isolatiewaarde van enkel glas tot wel 60% verhogen!

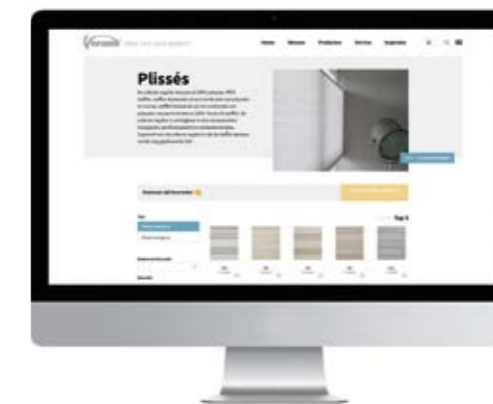

In deze brochure vind je alle kleuren en eigenschappen van de collectie plissés. Wil je meer informatie over onze raamdecoratie collectie? Bekijk dan onze raamdecoratie brochure.

GRATIS KLEURSTALEN

Op www.verano.nl/gratis-kleurstalen kun je gratis vijf kleurstalen aanvragen. Op deze manier kun je de materialen voelen en de kleuren 'matchen' met elementen uit jouw interieur.

Scan deze QR-code met de camera van je smartphone en vraag direct je gratis kleurstalen aan!

COLLECTIE HONINGRAAT

De collectie honingraat bestaat uit 100% polyester stoffen. De collectie honingraat is verkrijgbaar in vier transparanties: transparant, semi-transparant, lichtdoorlatend en verduisterend plus. Typisch voor de collectie honingraat is dat honingraatstoffen bestaan uit twee lagen gevouwen stof in een honingraatstructuur. Tussen de dubbele stoflaag wordt lucht vastgehouden, wat de isolatiewaarde van ramen sterk verbetert.

COLLECTIE PLISSÉ

Deze collectie bestaat uit 100% polyester (PES) stoffen, 100% Trevira CS of stoffen bestaande uit een combinatie van polyester en linnen. De collectie is verkrijgbaar in vier transparanties: transparant, semi-transparant, lichtdoorlatend en verduisterend plus. Typerend voor deze collectie is dat de kleuren bestaan uit veel natuurlijke en pasteltinten die rust en zachtheid uitstralen. De collectie met vernieuwde patronen en dubbelzijdige kleuren creëert een modieuze en rustgevende uitstraling voor elke woning.

MATERIAALEIGENSCHAPPEN

MATERIAAL

De stoffen in de collectie plissés bestaan uit polyester (PES), Trevira CS, 100% recycled PES of een combinatie van polyester en linnen. De meeste stoffen zijn 100% polyester. Dit is een synthetische vezel (kunstvezel) met een hoge slijtweerstand, een goede stabiliteit en een hoge lichtechtheid. Polyester krimpt en kreukt vrijwel niet, is goed te reinigen en goed bestand tegen zonlicht. Trevira CS is een permanent vlamvertragende vorm van polyester.

tru@

Een vijftal stoffen zijn gemaakt van post-consumer gerecycled PES. Deze stoffen, met het True-logo, zijn echte duurzame stoffen. Gemaakt met eerlijke, traceerbare materialen en eerlijke productieprocessen. Waarmee we echt een bijdrage leveren aan de toekomst van onze planeet en haar bewoners.

TRANSPARANTIES

De stoffen in de collectie plissés bevatten stoffen in diverse transparanties: van transparant tot verduisterend plus. Een transparante stof zorgt voor een diffuse lichtinval en de kleur van de transparante stof bepaalt de mate van lichtinval. Lichte kleuren laten immers meer licht door dan donkere kleuren. Een verduisterend plus stof zorgt voor een hoge mate van verduistering, maar 100% is nooit te realiseren door de kier die ontstaat aan de zijkan-ten van de raamdecoratie.

-  **Transparant**
-  **Semi-transparant**
-  **Lichtdoorlatend**
-  **Verduisterend plus**

ENERGIEWAARDEN

De stoffen in de collectie plissés kennen een drietal eigenschappen: de transmissie van energie (TS), de reflectie van energie (RS) en de absorptie van energie (AS). De kernmerken transmissie van energie, reflectie van energie en de absorptie van energie hebben samen altijd een waarde van 100%.

DE TRANSMISSIE VAN ENERGIE (TS)

De hoeveelheid zonne-energie die doorgelaten wordt door de stof. Hoe hoger het percentage, hoe meer energie wordt doorgelaten door de stof.

DE REFLECTIE VAN ENERGIE (RS)

De hoeveelheid zonne-energie die weerkaatst wordt door de stof. Hoe hoger het percentage, hoe meer energie wordt gereflecteerd door de stof.

DE ABSORPTIE VAN ENERGIE (AS)

De hoeveelheid zonne-energie die geabsorbeerd wordt door de stof. Hoe hoger het percentage, hoe meer energie wordt geabsorbeerd door de stof. Donkere stofkleuren absorberen bijvoorbeeld meer energie en geven meer warmte af.

STOFWIJZER

Onder de diverse stoffen in de collectie plissés vind je symbolen die de eigenschappen van de stof weergeven. Met behulp van de stofwijzer hieronder kun je bepalen welke stof het beste bij jouw wensen past. Heb je vragen over specifieke stofeigenschappen? Ga dan langs bij jouw Verano® partner. Je vindt de dichtstbijzijnde partner snel en eenvoudig op www.verano.nl.

Plissés | Kleur 72.0401

Deze stoffen zijn voorzien van een witte achterzijde. Hoe lichter de kleur, hoe lager de warmteopbouw in jouw huis zal zijn.

Deze stoffen zijn voorzien van een zilverkleurige achterzijde. Hierdoor ontstaat een betere reflectie, op die manier wordt de warmte beter tegengehouden dan bij een donkere kleur.
